

✉ Email Encryption

DON'T TAKE PRIVACY FOR GRANTED

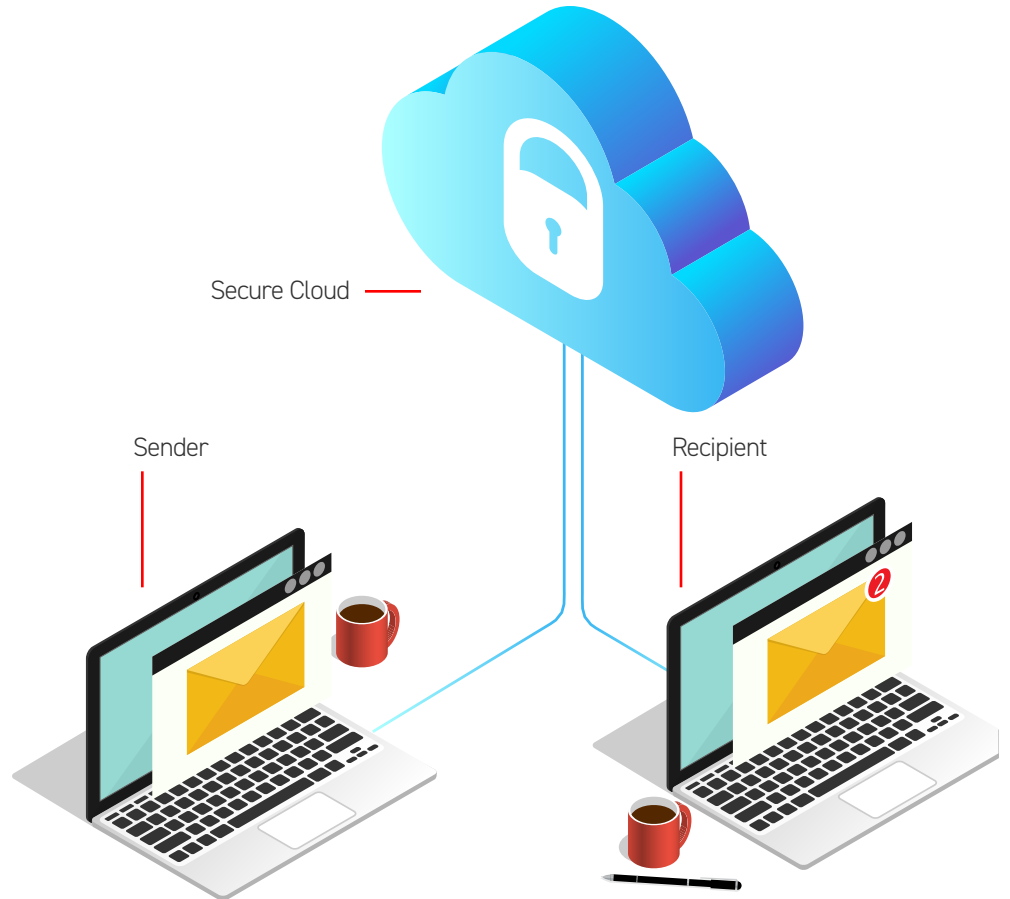

Send confidential emails with confidence, using Email Encryption. With Email Encryption, your message remains encrypted all the way to the recipient.

You control who sees your messages, and the patented delivery slip will show you when they are received and opened. Email Encryption truly has brought next-generation encryption to your business today.

Encryption made easy.

Email Encryption also ensures protection of confidential information and helps maintain regulatory compliance, especially when dealing with HIPAA, FINRA, SOX, GDPR and other privacy standards.

The Secure E-signature feature collects electronic signatures and approvals from your inbox. It also supports wet signature (stylus or finger), stamp (handwritten signature image), typed signatures, advanced PIN, or SSO re-authentication.

Features

- Office 365 compatible
- One-click encryption right from your mailbox
- Track (and prove) when a message is received, read, replied to, or forwarded
- Provides delivery slip and registered mail options
- Recall messages—even after they are read—and control whether messages can be replied to or forwarded
- Add unique passwords to specific messages so that only the intended recipient can open them for even greater security
- Enables large file attachment encryption and delivery
- Includes Outlook plug-in, Windows and Mac desktop agents, browser plug-ins
- Optional built-in Secure E-signature feature
